

REMARKS

Claims 1 - 10 are pending in the application.

As required in the Office Action, a new Abstract is enclosed which avoids legal phraseology.

The specification has been amended to provide the appropriate headings.

The claims have been amended to render them definite.

The Examiner will note that the suggestions made in the Office Action have been followed. With respect to the term vibration-selective, it is submitted that it is clear that the detection unit operates when selected vibrations occur.

Therefore, reconsideration and allowance of the present application are respectfully requested.

Any additional fees or charges required at this time in connection with this application may be charged to Patent and Trademark Office Deposit Account No. 11-1835.

Respectfully submitted,

ABSTRACT OF THE DISCLOSURE

A motor vehicle with a vehicle body, which comprises at least a pair of struts, at least one vibration-selective detection unit for detecting longitudinal stresses on the struts during operation of the vehicle, and at least one actuator for producing a force that counteracts the longitudinal stress, wherein the at least two struts are connected by a holding device, which is movably supported relative to the body, wherein a common actuator is configured for simultaneously adjusting the struts connected by the actuator.
